

Planetarium Show

Water

A Cosmic Adventure

association des planétariums
de langue française

Cosmic Adventure is a 30-minute planetarium show exploring how water formed, its relationship with the cosmos, and how we search for it on distant exoplanets. You will be immersed in deep space and its fantastic timescales, taken through the turbulent primordial Universe and into the depths of

superb nebular star nurseries, yet all the while following the mechanisms that create the nucleus of oxygen. Realistic 3D animations and breathtaking footage will take you on a fascinating journey to the driest place on Earth, the Atacama Desert in Chile to find out how astronomers search for water in the Universe.

Embark on the exciting undertaking of searching for the symbol of life in the Universe
Learn how astronomers search for life on other planets
Explore the turbulent origins of hydrogen and oxygen
